

## Educations

- 2020– **M. S. in Physics**, *Beihang University*, Beijing, China. GPA: 3.87/4.  
Major GPA: 3.96/4, ranking **1/20**.
- 2016–2020 **B. S. in Applied Physics**, *Beihang University*, Beijing, China. GPA: 3.78/4.  
Major GPA: 3.91/4, ranking **top 3%**.

## Honors and Awards

- 09.2022 National Scholarship. **1%**
- 05.2019 Beihang “Yuanhang” Global Study Summer Research Scholarship Award. **1.5%**
- 2018–2022 First Prize in the Learning Excellence Scholarship of Beihang University. **3%**

## Publications

- [1] **Binbin Liu** et al., *Second-order and real Chern topological insulator in twisted bilayer  $\alpha$ -graphyne*, *Phys. Rev. B* 106, 035153 (2022).
  - [2] Wang Yang\*, **Binbin Liu**\*, et al., *Large bilinear magnetoresistance from Rashba spin-splitting on the surface of a topological insulator*, *Phys. Rev. B* 106, L241401 (2022), (Letter).
  - [3] Xu-Tao Zeng, Ziyu Chen, Cong Chen, **Binbin Liu**, et al., *Topological hinge modes in Dirac semimetals*, *Front. Phys.* 18, 13308 (2023).
  - [4] **Binbin Liu**<sup>†</sup>, Xian-Lei Sheng<sup>†</sup>, Yuxin Zhao<sup>†</sup> and Shengyuan A. Yang, *Non-centered inversion symmetry in momentum space*. (To be submitted to PRL.)
  - [5] Xu-Tao Zeng, **Binbin Liu**, et al., *Three-dimensional real Chern insulator in bulk  $\gamma$ -graphyne*. (To be submitted to PRB.)
  - [6] **Binbin Liu** et al., *First and second-order topological insulator in 2D elementary materials*. (Invited review, in preparation.)
  - [7] **Binbin Liu**, *Spinless eightfold fermions from projective symmetries*. (In preparation.)
  - [8] **Binbin Liu** and Chueng Ji, *Anatomy of nucleon self-energy from equal-time to light-front*. (To be submitted to PRD.)

## Research

- 2022– **Topological Insulators with Momentum-non-centered Inversion Symmetries**, Beijing, China
- Advisors Prof. Yuxin Zhao, Nanjing U., Prof. Shengyuan A. Yang, Singapore U. of Technology and Design, and Prof. Xian-Lei Sheng, Beihang U.
- Description Discovered non-centered inversion symmetries in the momentum space from projective symmetry algebras, identified and characterized novel twisted inverse topological edge states with off-centered crossing points in the momentum space, distinct from edge states protected by the normal inversion symmetry. Designed topological circuits to simulate the nontrivial states [4].

- 2021–2022 **Higher-order Topology in Moiré Superlattice**, Beijing, China  
 Advisors Prof. Xian-Lei Sheng, Beihang U. and Prof. Shengyuan A. Yang, Singapore U. of Technology and Design.
- Description Identified twisted bilayer  $\alpha$ -graphyne as a new second-order topological insulator from first-principles [1] and demonstrated that the second-order topological states are generally induced by effective magnetism or Zeeman fields [1,5-6].
- 2021–2022 **Large Bilinear Magnetoresistance (BMR) from Rashba Spin-Splitting on the Surface of a Topological Insulator**, international  
 Advisors Prof. John Q. Xiao, U. of Delaware, Prof. Xian-Lei Sheng, Beihang U. and Prof. Shengyuan A. Yang, Singapore U. of Technology and Design.
- Description Discovered Rashba spin-splitting quantum well states developed near the surface of  $\text{Bi}_2\text{Se}_3$  decorated with transition-metal atoms Cu or Au, explaining the observed unusual large BMR in experiments [2].
- 2019–2022 **Anatomy of Nucleon Self-energy from Equal-time to Light-front**, NC, USA  
 Advisor Prof. Chueng Ji, APS fellow, Department of Physics, North Carolina State University.
- Description Identified a light-front instantaneous Feynman diagram from the backward moving part of a nucleon-pion loop diagram and found its leading non-analytic behavior. Traced a zero mode contribution (bubble diagram) between the instant and light-front form dynamics [8].

## Presentation

- 12.2021 Light-Cone 2021 (Korea). [Anatomy of nucleon self-energy from equal-time to light-front.](#)

## Skills

- Models** Tight-binding (TB) and  $\mathbf{k} \cdot \mathbf{p}$ .
- Materials** VASP, Wannier90, Slator-Koster TB.
- Circuits** Construct topological circuits based on TB models and simulate them with “hspice”.
- Computer Matlab, Mathematica, Python, Linux, Latex, Cinema 4D, Adobe Illustrator and Photo-shop.
- Others Topological characterization from K-theory and topological quantum chemistry; Feynman diagram calculations.

## Advanced Courses

- M. S.** Group Theory (98), Quantum Many-Body Theory (95), Quantum Optics (96).  
**B. S.** Solid State Physics II (95), Advanced Quantum Mechanics (94).

## Extracurricular Activities

- 2021/2022 Teaching assistant for Solid State Physics for two semesters.
- 2020–2021 Student president of department academic associations, with leadership in departmental academic activities, mainly for graduate students.
- 2012– Playing Bach, Beethoven, Chopin, and Mozart.
